COMPANY PROFILE

Innovation and safety at height.

Advanced technological solutions for safer and more efficient operations, designed to meet the needs of every sector.

Over 40 years of innovation for safety and efficiency.

Bravi Platforms designs and manufactures mobile work platforms that revolutionize the aerial work industry. For over 40 years, the company has stood out for the innovation, safety, and efficiency of its products, enhancing productivity and reducing risks for operators.

Our solutions are essential today and indispensable tomorrow: with Bravi, you need nothing else. Our products are the only tool you need for low-level work. Simple, complete, and efficient, from construction sites to industry, they ensure safety and maximum productivity.

Today and tomorrow.

Our history: a journey of innovation.

1980

Founded in 1980 by Pierino Bravi, the company began as Braviisol, specializing in the industrial installation of partition walls and ceilings.

1986

The need for more efficient tools for working at height led to the design of the first self-propelled mobile platform in 1986.

1995

In 1995 the first hydraulic lift models were introduced, which would evolve into the current Leonardo HD, today the flagship model of the Bravi Platforms range.

2010

With the expansion of production and the launch of new picking solutions, Bravi Platforms consolidates its global presence and continues to innovate the industry.

2025

Bravi Platforms will launch a new production facility, designed to further optimize industrial processes and to offer an even faster and more efficient service to customers worldwide.

Leonardo HD

The future of working at height.

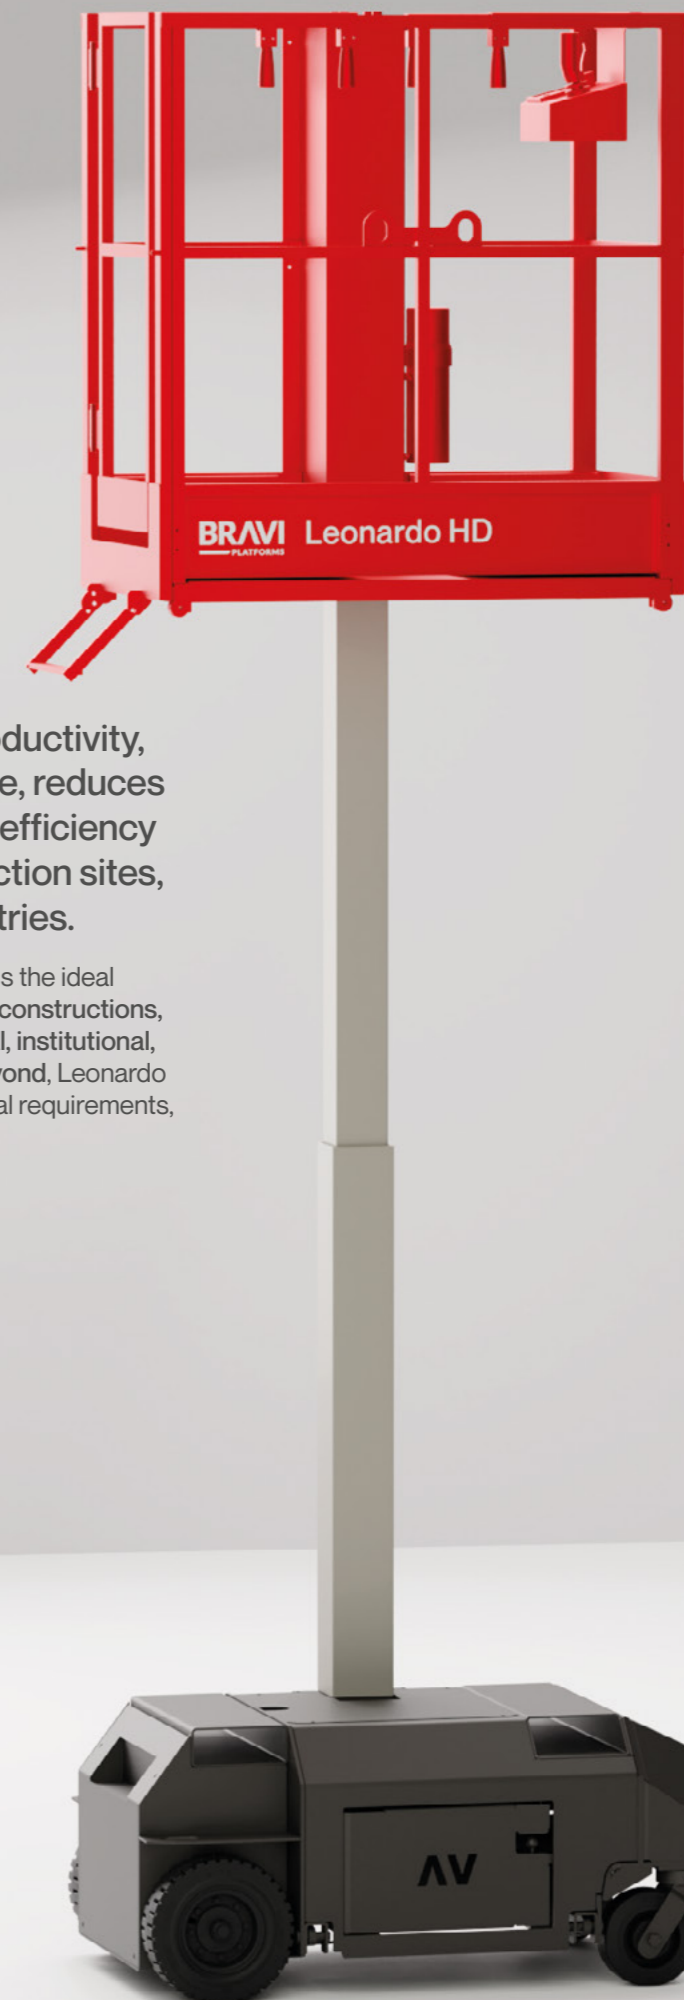

Leonardo HD represents the ultimate solution for working at low heights, combining efficiency, safety and versatility on a single platform.

With a working height of 4.9 mt, Leonardo HD is designed to make the operator self-sufficient and enables him to produce a greater amount of work, completely eliminating the need to use ladders and scaffolding.

Simple in design and user-friendly, Leonardo HD is designed to last a long time with minimal maintenance costs and a superior residual value. The product's reliability is due to the maintenance-free mast, guaranteed for 10 years, and to a sturdy, shock-proof steel chassis with a design that prevents the deposit of residual materials and debris, which can often damage the unit.

BRAVI
PLATFORMS

Leonardo HD

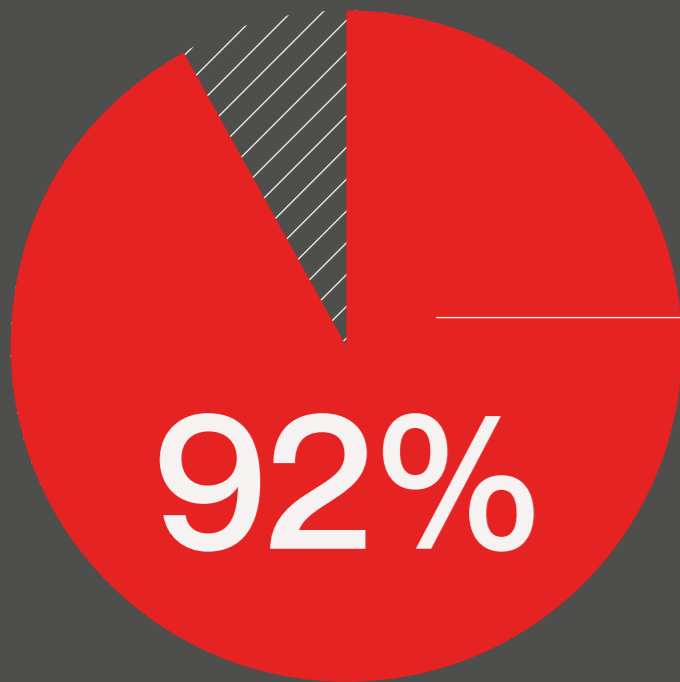

Designed to ensure a greater productivity, Leonardo HD optimizes work time, reduces risks for operators and improves efficiency in environments such as construction sites, logistics, maintenance and industries.

Versatile and high-performance, Leonardo HD is the ideal solution for a wide range of sectors. From new constructions, renovations or maintenance works in industrial, institutional, commercial, healthcare environments and beyond, Leonardo HD perfectly suits the most complex operational requirements, ensuring safety and efficiency.

Leonardo HD: The answer to the needs of modern construction sites.

The construction industry is today facing a crucial challenge that requires a rethinking of strategies in the rental market.

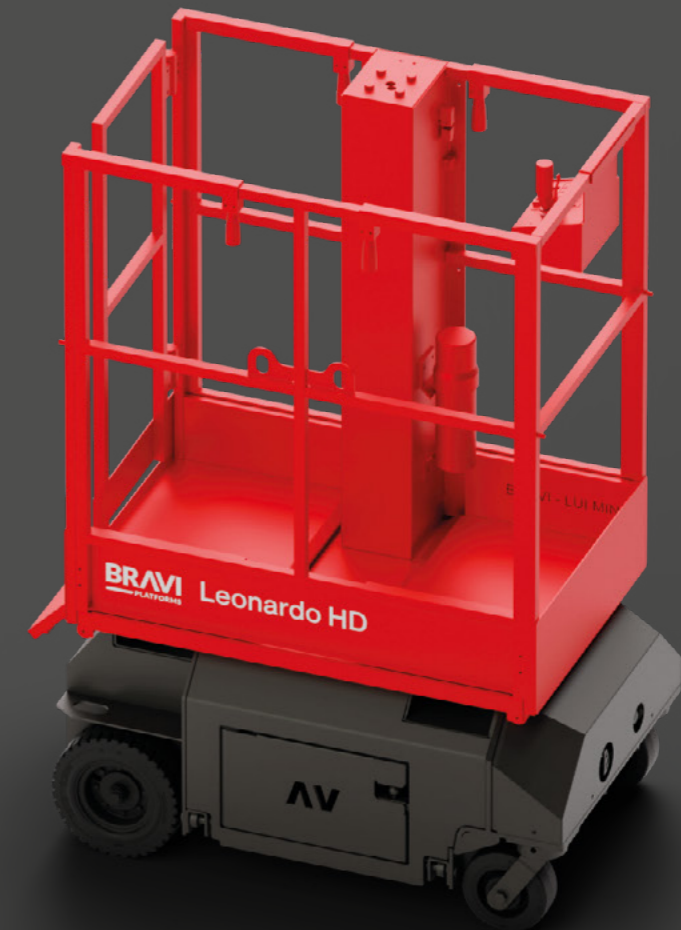

In fact, according to a study conducted by *Introspective Market Research*, 81% of global projects have ceilings below 5 mt (16 ft) and still use in 92% of cases oversized equipment to work at low heights, with direct impacts on safety and productivity.

92% of scissor lifts sold between 2017 and 2023 are used in projects with ceilings below 5 mt (16 ft). This equipment is inadequate and oversized for working at low heights and has a direct impact on safety and productivity.

Specifically designed for over 30 years to work at low heights, Leonardo HD can fully replace ladders, scaffolding and traditional lifts, effectively covering 81% of the world's construction sites.

The market is not looking for bigger solutions, but smarter ones. Innovating today means answering the modern needs of construction sites: more compact, safe and versatile platforms such as **Leonardo HD**.

Innovation and performance for every need.

Bravi Platforms creates tailored solutions for working at low heights, designed to ensure maximum safety, efficiency and operational versatility.

In addition to Leonardo HD, the product range includes:

Lui 460

An evolution of the Leonardo HD model, designed to offer greater working height (6.6 mt – 21 ft) without compromising maneuverability and safety. Due to its robustness and stability, it is ideal for industrial maintenance and complex logistics environments.

Spin-Go

A compact and lightweight push around platform, perfect for retail and warehouse environments with limited spaces. Its motorized lifting system facilitates operators' work and improves safety, reducing the risk of injuries associated with the use of traditional ladders.

Sprint

The ideal solution for material handling, combining efficiency, safety and user-friendliness. With a solid and compact design, certified to EN280 and EN ISO 3691, Sprint optimizes working time in warehouses, retail shops and logistics centers.

Sprint Large Parcels

Perfect for the picking and handling of bulky and heavy parcels in retail, furniture and electronics warehouses, Sprint LP incorporates an adjustable and upgraded load tray which facilitates fast and safe loading and unloading operations.

Sprint Tire Lifter

The Sprint Tire Lifter is the ultimate tire handling solution. The motorized lifting compartment supports up to 150 kg (330 lbs), optimizing handling and transport in workshops, service centers, automotive warehouses and tire shops.

Target and application areas.

Bravi Platforms addresses several strategic stakeholders in the material handling sector, offering advanced solutions to increase safety and operational efficiency.

Rental companies

Bravi provides highly reliable platforms designed to minimize maintenance costs and maximize return on investment. The innovation behind its products ensures durability and user-friendliness, key elements for the rental industry.

Equipment dealers

To broaden the product offering the company offers technologically advanced and easy-to-manage solutions, allowing partners to differentiate themselves in the market with intuitive, high-performance units.

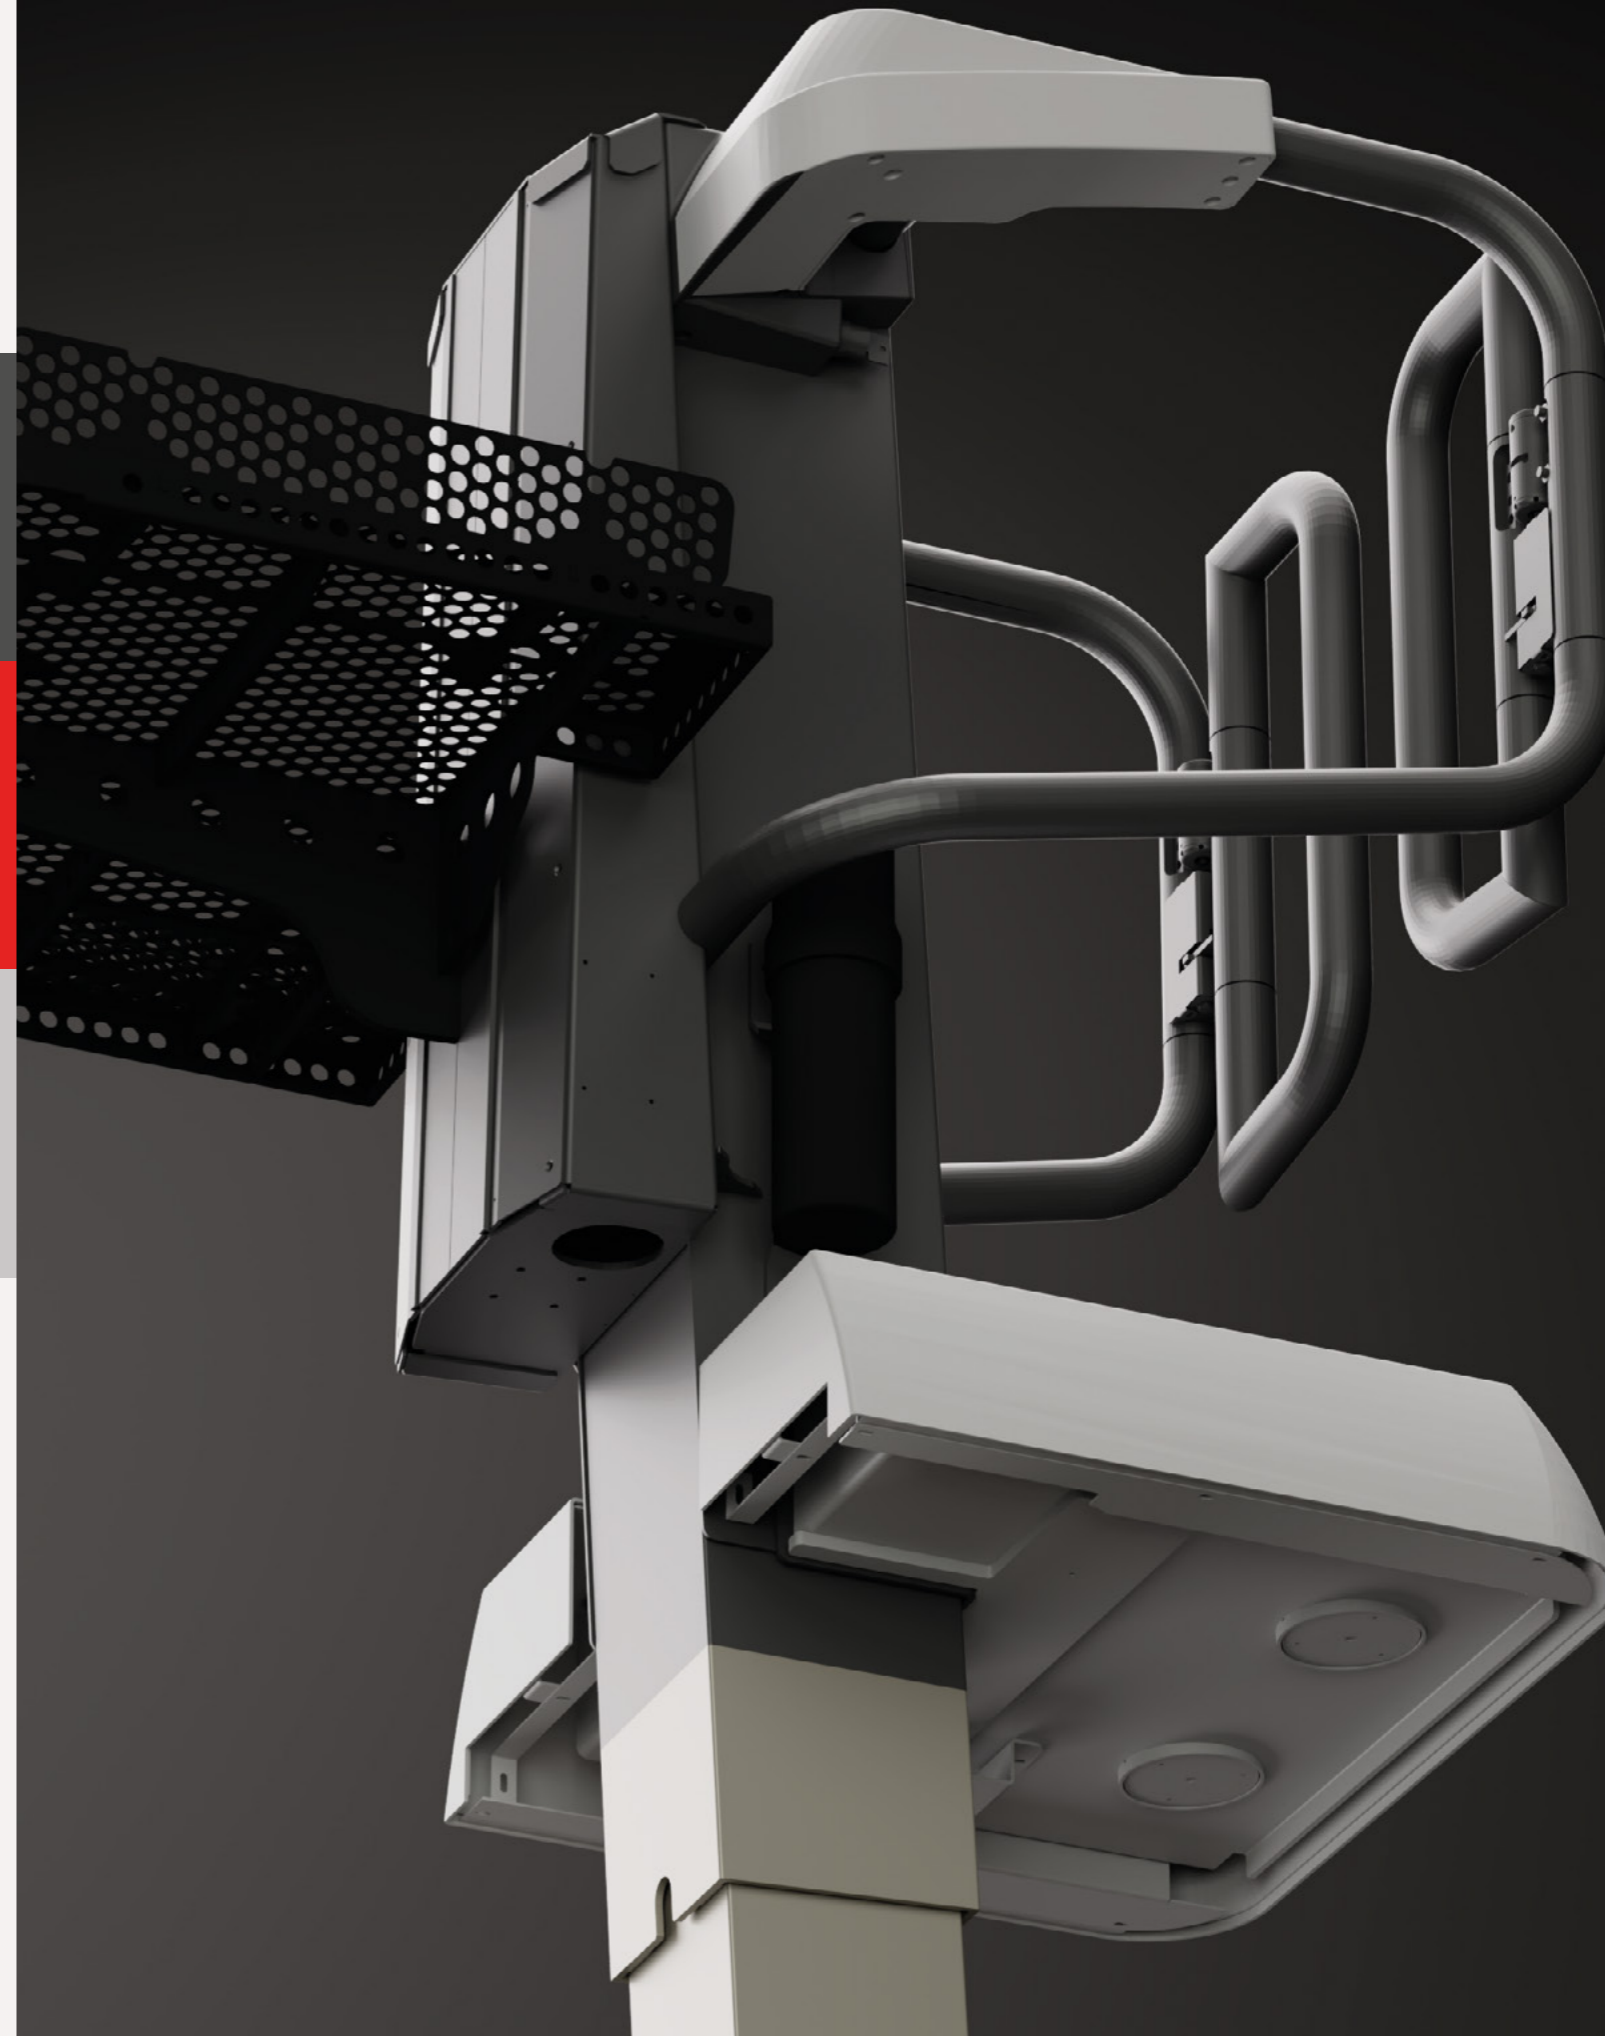

Professional Sectors

Bravi products are ideal for a wide range of professional applications, including construction, industrial maintenance, logistics and retail. They offer greater safety than traditional equipment, reducing the risk of accidents and improving operational productivity.

Bravi units are perfectly suited to the needs of construction sites, warehouses, logistics centers, retail shops and production environments, ensuring tailor-made solutions for every working environment.

Thanks to their compactness and maneuverability, they are particularly effective in tight and dynamic environments, where speed of execution and safety are essential.

The company also stands out for the support it provides to its customers, offering targeted advice to identify the most suitable solutions for their specific needs, guaranteeing continuous assistance and spare parts always available.

PRODUCTION MADE IN ITALY

The entire Bravi Platforms range is designed and manufactured in its own production facility in Italy, a modern center covering 7.000 sqm (75.347 sqf) with a production capacity of 3.000 units per year.

Every stage of production, from design to assembly, is handled with craftsmanship and rigorous quality standards, ensuring maximum reliability and durability.

The focus on innovation and process optimization allows the company to offer products with unique features on the market, while maintaining competitive costs without compromising quality and safety.

QUALITY AND CERTIFICATIONS

Bravi Platforms operates with the highest quality standards, and it is ISO 9001:2015 certified.

Each platform undergoes extensive safety testing before being released to the market, to ensure reliable performance and compliance with international regulations.

Certifications achieved by Bravi products include also :

- CE (EN280, EN ISO 3691)
- UL/CSA (ANSI A92.20)

Thanks to the selection of the best materials and strict controls at every stage of production, Bravi machines ensure a longer service life and significantly reduced maintenance requirements compared to conventional systems.

SERVICE AND SPARE PARTS WITH BRAVI PARTS

Bravi Platforms offers fast and efficient after-sales service.

Through Bravi Parts, original spare parts are available within 48/72 hours, reducing downtime and ensuring operational continuity for customers.

Technical assistance is conceived to offer immediate and customized solutions, with dedicated support for every need. A service that customers can always rely on to keep their equipment at peak performance.

TECHNICAL AND SALES TRAININGS

Bravi Platforms invests in training to ensure customers and partners make the best use of their units.

The company offers technical training courses for operators and maintenance technicians, with the aim of improving safety, product knowledge and machine handling in the field.

For the sales area, Bravi provides training programs dedicated to the sales teams of all dealers and rental partners, with in-depth information on technical features, competitive advantages and the best market positioning strategies.

Training courses are held either in person, at Bravi's headquarters or at the customer's premises, or online via digital platforms, to guarantee flexible and effective training on a global level.

GLOBAL PRESENCE AND INTERNATIONAL GROWTH

Bravi Platforms is present in 48 countries and serves over 740 customers worldwide.

Its internationalization strategy has made the brand a global point of reference in the mobile platform industry.

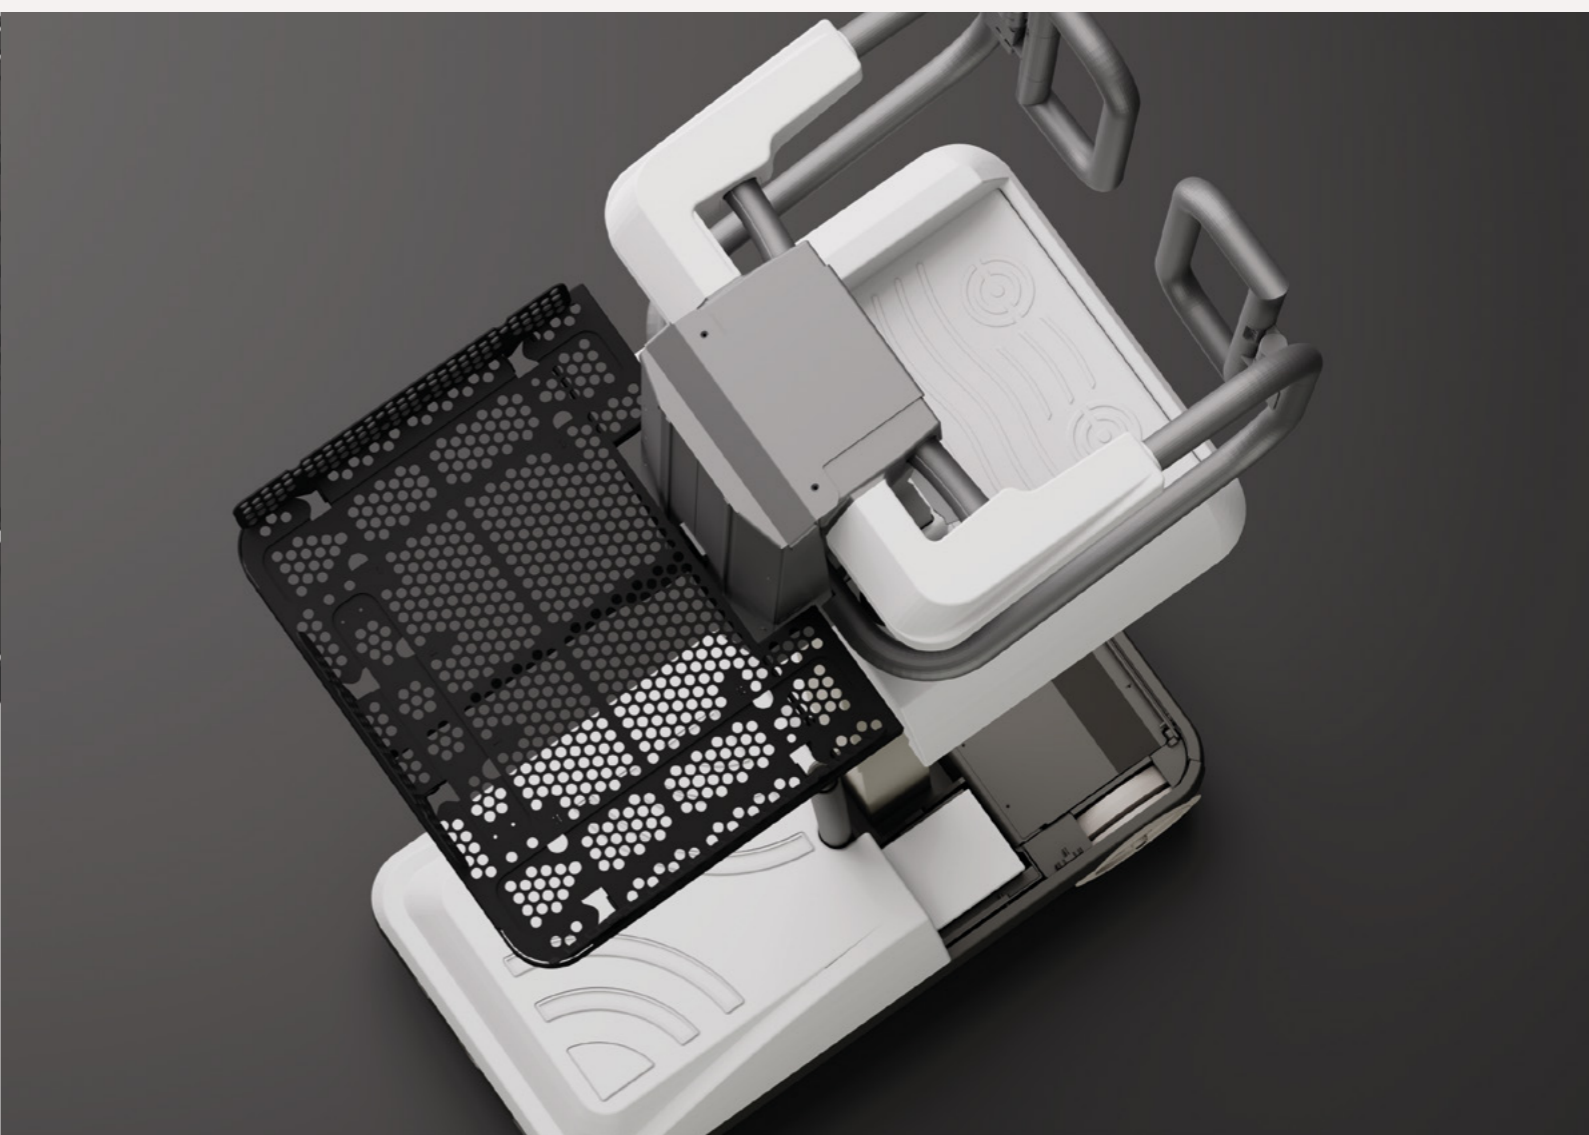

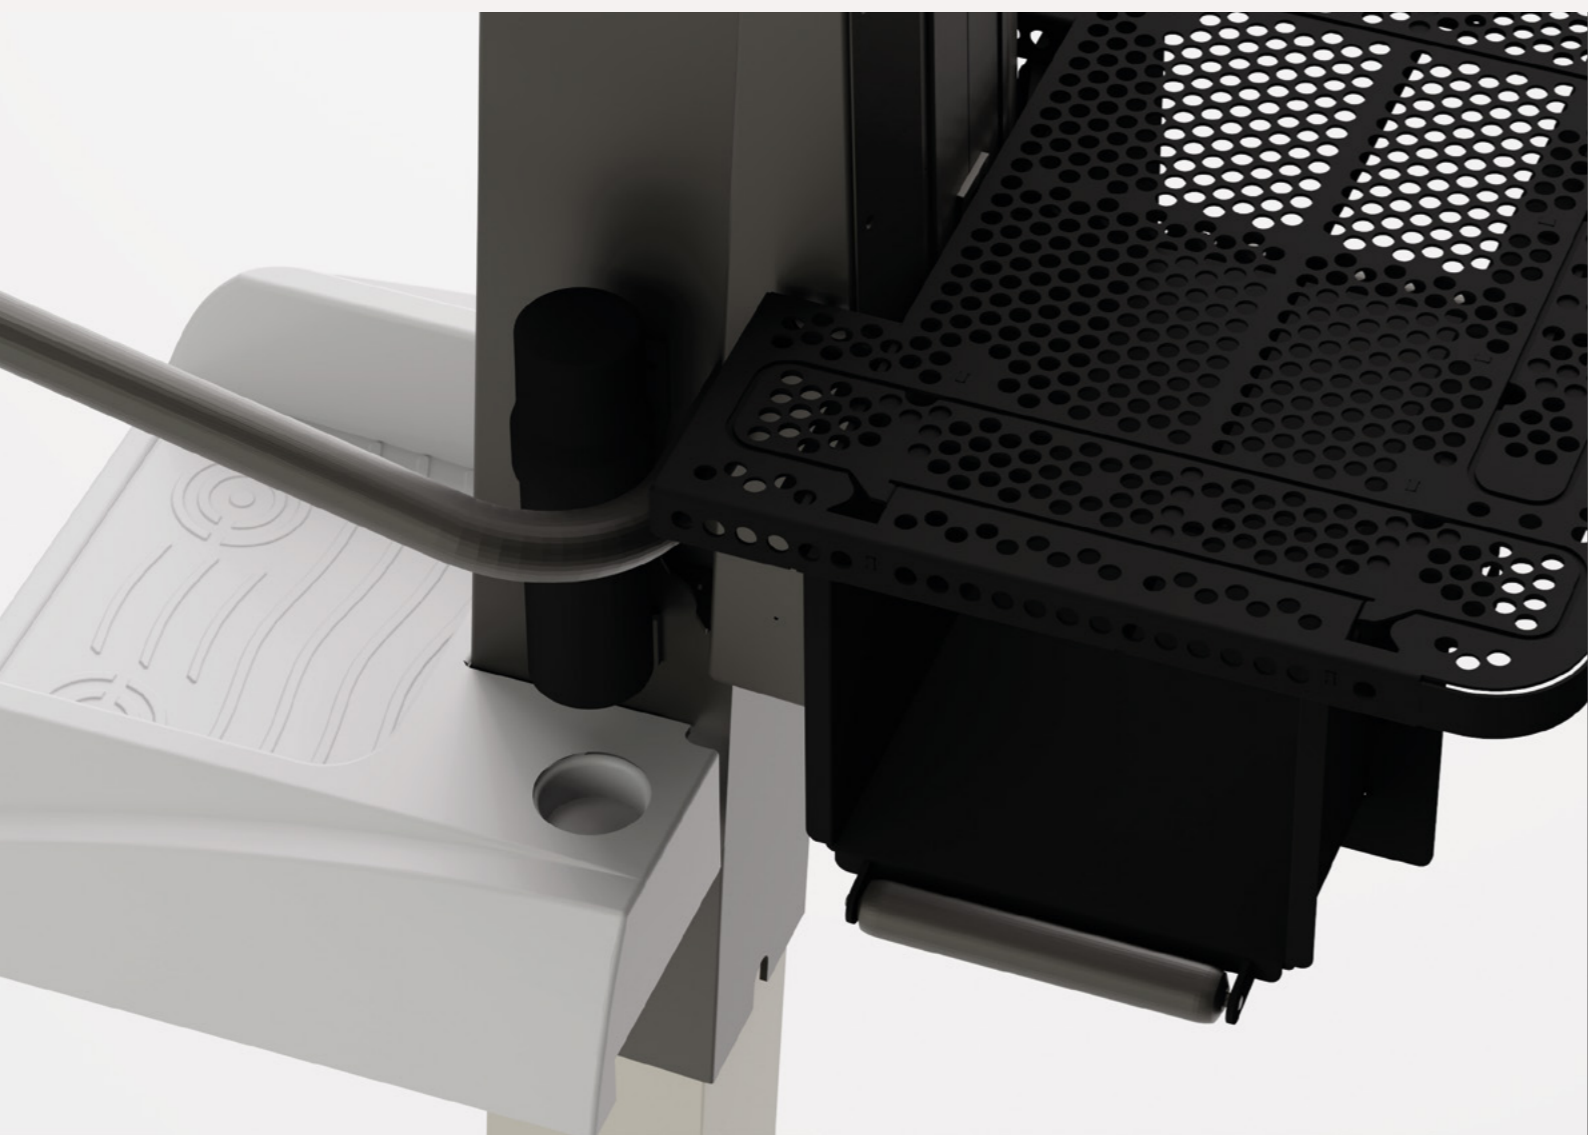

With an extensive network of distributors and service centers, Bravi ensures efficient technical support in every market. The focus on innovation, safety and productivity has enabled the company to consolidate its position in major global markets.

TOWARDS THE FUTURE: INNOVATION AND SUSTAINABILITY

Bravi Platforms continues to invest in research and development to anticipate the needs of an ever-changing industry.

The company is expanding its production capacity with the opening of a new facility in 2025, designed to further optimize industrial processes and guarantee an even faster and more effective service to customers.

The future of handling at low height lies in increasingly safe, efficient and sustainable solutions. Bravi Platforms is committed to reducing the environmental impact of its operations by adopting more sustainable production processes and developing energy-efficient machines.

Find out how Bravi Platforms can revolutionize your work at low heights.
